

1 Turning on device

Press and hold the power button for **2 seconds**.
Wait 1 to 2 minutes until elevation and pointing direction are displayed.

2 Pointing

Pointing direction and elevation will appear on screen. Simply point the device in the required direction until you see signal strength change, ex: to more than 5%.

You can also use a compass to find your bearings.

3 Maximizing signal strength

Maximize the signal strength by moving the device left and right, up and down. **Aim for over 25%.**
Optimal signal strength is 45% to 55%

4 Registering with network

Press and hold the X button until you see "attaching." Wait until Data Ready is displayed.

5 Connecting to WiFi

Connect to WiFi using your smartphone, tablet or PC settings.

Reminder: Please ensure that the WiFi (antenna symbol) is displayed and ensure you have followed **the low-data mode procedure** for your device. Please note that by default, our WiFi is called STRIGO-XXXXXX-X

For more technical details, please download the manufacturer's user guide (Hughes 4201) from our website. https://strigo.ca/content/files/Strigo_Hughes_4201_User-Guide-EN.pdf

To optimize your experience and speed, remember to set your device (smart phone, laptop, etc.) to low-data mode. For more details, visit strigo.ca/en/support
